# The HSTJupiter Group: 20 years of Pro-Am Collaboration

**Christopher Go**[1] and John Rogers[2]
[1]University of San Carlos
[2]British Astronomical Association

For 20 years the hstjupiter mailing list has been the venue where amateur planetary imagers collaborate and support Planetary Astronomers in various field of research including space missions. The hstjupiter group had been the venue where several discoveries were first announced (ie several outbreaks in Jupiter and Saturn, Bird Strike, several impacts on Jupiter). This is also a venue where planetary astronomers request imagers for support. We will discuss the contributions of this mailing list and the future plans.
