

FDmentor - Solutions and Guidelines for Universities

Katarzyna Biernacka

Humboldt-Universität zu Berlin, 0000-0002-6363-0064

Research data management is one of the most important topics a researcher has to deal with in the digital era. During his/her investigative work a lot of digital data is incurred. A good management of these should be a part of the research process to make the data FAIR (Findable, Accessible, Interoperable, Re-usable). The role of the universities is to support their researchers in the best way by providing the right tools and services – on either the organizational and technical level.
