

de-RSE17: Insights from the software creation process within German academia

Stephan Janosch

Max-Planck-Institut für Molekulare Zellbiologie und Genetik (MPI-CBG), Orcid 0000-0002-2401-6862

Presentation of preliminary results of the survey about software creation within the German research community. Topics covered in the survey are: citation practises, funding sources, quality assurance, community interactions, performance feedback and social structure of the community.

After the presentation the session will become interactive. The audience will split into smaller work groups and each group discusses the survey results on their own and collect feedback in collaborative manner.

The groups will briefly present their results to the other participants towards the end.

The goal of the session is to teach the audience the results of the survey and collaboration on input for a better survey next year.
