

Mobile technologies, as tools to improve researches and communication in developing countries.

Mbunzama Lokwa
Avonax Group

Mobile technology, including everything from inventive applications for smart phones to simple text messaging, is increasingly ubiquitous in the world and holds great potential for impact in changing the culture in areas such as researches and communication.

Through this presentation, I will illustrate how mobile technologies can play a considerable role in improving researches and communication among scholars and different institutions.

The presentation will specially focused on the context of developing countries in Africa; case of the democratic republic of Congo.
